

Abstract of the Disclosure

The display attribute of data essential for structuring list display data is varied according to the degree of newness of information, so that a user can easily verify the newest information. On a list display data generating apparatus of this invention, the display attribute, for example, the color, the background, the style, etc. of characters, or the like, which is essential for a listing display such as the registration date and time of information, etc., can be varied on a display screen of an information listing. Accordingly, the degree of newness of information can be displayed without displaying, for example, a special image representing the number of elapsed days, and without reducing the amount of information displayed on one screen. Consequently, a user can quickly grasp the registered contents of information to be browsed without overlooking the information.
